## **Definition Of Unsaturated Solution In**

An unsaturated solution is a chemical solution in which the solute concentration is lower than its equilibrium solubility. All of the solute dissolves in the solvent. When a solute (often a solid) is added to a solvent (often a liquid), two processes occur simultaneously. Dissolution is the dissolving of the solute into the solvent.

...

Unsaturated Solutions. Unsaturated solutions are solutions in which the amount of dissolved solute is less than the saturation point of the solvent (at that specific temperature gradient). If the amount of dissolved solute is equal to the saturation point of the solvent, the solution is called a saturated solution.

## **Definition of unsaturated solution - Chemistry Dictionary**

An unsaturated solution is more dilute than a saturated solution.

When referring to organic compounds, unsaturated means a molecule contains double or triple carbon-carbon bonds.

Examples of unsaturated organic molecules include  $\text{HC}=\text{CH}$  and  $\text{H}_2\text{C}=\text{O}$ . In this context, being saturated can be thought of as being "saturated with hydrogen atoms."

## **Definition Of Unsaturated Solution**

An unsaturated solution is a solution that contains less than the maximum amount of solute that is capable of being dissolved. The figure below illustrates the above process and shows the distinction between unsaturated and saturated. Figure 1. When 30.0 g of NaCl is added to 100 ml of water, it all dissolves, forming an unsaturated solution.

## Unsaturated Solution Definition Chemistry

An unsaturated solution is one in which a little amount of solute has been added to the solvent. A solution is said to be saturated when a solute is not able to dissolve in the solvent. A supersaturated solution, on the other hand, is when the excess of solute is dissolved in the solvent as a result of changes in temperature, pressure or other conditions.
