Developmental biology is mainly analytical: researchers study embryos, suggest hypotheses and test them through experimental perturbation. From the results of many experiments, the community distils the principles thought to underlie embryogenesis. Verifying these principles, however, is a challenge. One promising approach is to use synthetic biology techniques to engineer simple genetic or ...

I. Introduction. Historically, vertebrate developmental biology and toxicology has been studied using low-throughput mammalian models, but the zebrafish (*Danio rerio*) has emerged as a viable alternative to these conventional models. Zebrafish are a tropical freshwater fish native to Southeast Asia with a short generation time (3–4 months) and small size (3–4 cm). 1 This teleost has high ...
