There are many different SIP scenarios and call flows in a VoIP environment. This post describes a very basic SIP call flow case where A is the caller and B is the recipient. Users A and B probably have a SIP proxy server each handling the signaling on behalf of them. When A wants to initiate a new call, it sends an initial INVITE to B.

A Basic SIP Call Flow | TelcoNotes

SIP as both a protocol and an architecture has a number of places where security can be applied. You can secure SIP signaling with Transport Layer Security (TLS). This encrypts the metadata of a call – e.g. who called who.

Understanding SIP Authentication | Tao, Zen, and Tomorrow

SIP (Session Initiation Protocol) is a signaling protocol, widely used for setting up, connecting and disconnecting communication sessions, typically voice or video calls over the Internet. SIP is a standardized protocol with its basis coming from the IP community and in most cases uses UDP or TCP. The protocol can be used for setting up, modifying and terminating two-party (unicast), or multiparty (multicast) sessions consisting of one or more media streams.

SIP Tutorial | Explanation on the basics of Session ...

- “The Session Initiation Protocol (SIP) is an application-layer control (signaling) protocol for creating, modifying and terminating sessions with one or more participants.”
- Can be used for voice, video, instant messaging, gaming, etc., etc., etc.
- Follows on HTTP – Text based messaging – URIs – ex: sip:dbaron@MIT.EDU

SIP is a signalling protocol designed to create, modify, and terminate a multimedia session over the Internet Protocol. It is an application layer protocol that incorporates many elements of the Hypertext Transfer Protocol (HTTP) and the Simple Mail Transfer Protocol (SMTP).

About this Tutorial

During the signaling setup, the SIP messages contain a Session Description Protocol (SDP) body which is the protocol used to negotiate the various media parameters between the endpoints (such as IP addresses, codecs, etc.). Finally, for the media the Real-Time Transport Protocol (RTP) is used in order to carry the voice packets.
